

# **Ultrasonic Distance Sensor EM400-UDL**

User Guide

### **Safety Precautions**

Milesight will not shoulder responsibility for any loss or damage resulting from not following the instructions of this operating guide.

- The device must not be disassembled or remodeled in any way.
- In order to protect the security of the device, please change the device password when first configuration. Default password is 123456.
- The device is not intended to be used as a reference sensor, and Milesight won't should responsibility for any damage which may result from inaccurate readings.
- Do not place the device close to objects with naked flames.
- Do not place the device in where the temperature is below/above the operating range.
- Make sure both batteries are newest when install, or battery life will be reduced.
- The device must never be subjected to shocks or impacts.

### **Declaration of Conformity**

EM400-UDL is in conformity with the essential requirements and other relevant provisions of the CE, FCC, and RoHS.

# 1. Product Introduction

### 1.1 Overview

EM400-UDL is a designed non-contact ultrasonic distance sensor. With this low power consumption technology, EM400-UDL can work up to 10 years with two 9000 mAh batteries. With multiple probes optional and different detecting ranges, it can satisfy different requirements.

With high protection IP rating and waterproof enclosure, EM400-UDL is widely used for outdoor applications such as water level, fill level of tanks and silos, presence of objects or snow level. Combining with Milesight IoT Cloud solution, users can manage all sensor data remotely and visually.

### 1.2 Features

- Optional probes vary from 25 to 1000cm for multiple applications
- Equipped with NTC thermistor for the detection and alarm of burning
- Built-in 3-axis accelerometer sensor to monitor device tilt status
- Damp-proof coating inside and IP67 waterproof enclosure for outdoor applications
- Built-in two 9000 mAh replaceable batteries and work for 10 years without replacement
- Equipped with NFC for one touch configuration, support card emulation mode
- Equipped with GNSS positioning (NB version only)
- Function well with standard LoRaWAN® gateways and network servers (LoRaWAN® version only)
- Compatible with Milesight IoT Cloud

# 2. Hardware Introduction

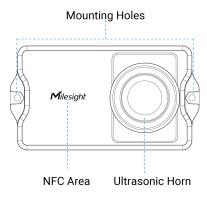

# 2.1 Packing List

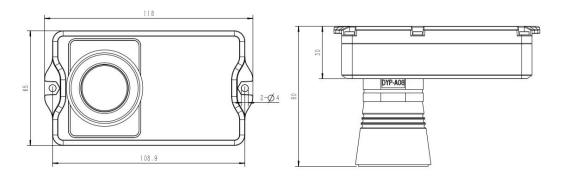

If any of the above items is missing or damaged, please contact your sales representative.

### 2.2 Hardware Overview

# 2.3 Dimensions (mm)

# 2.4 Power Button

EM400-UDL can be switched on/off via NFC. Besides, users can use power button to switch on/off and reset the device manually.

Function	Action	LED Indication
Switch On	Press and hold the button for more than 3 seconds.	Off → On
Switch Off	Press and hold the button for more than 3 seconds.	On → Off
Reset	Press and hold the button for more than 10 seconds.	Quickly Blinks
Check		Light On: Device is on
On/Off Status	Quickly press the power button.	Light Off: Device is off

# 3. SIM Installation (NB Version Only)

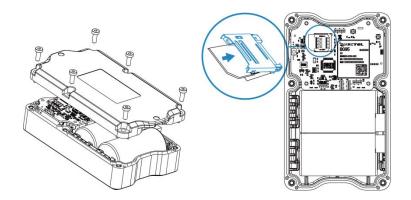

Release the screws and back cover, insert the SIM card (3FF), then replace the back cover to the device and fix the screws.

### Note:

- 1) PSM (Power Saving Mode) is required for the SIM card.
- 2) The device does not support hot plugging (also called hot swapping), please reboot the device after inserting the SIM card.

- 3) When a new SIM card is inserted to the device for the first time, it will take about 2 minutes to register to network; next time the registration time will be shorten to 30s.
- 4) When the device does not send data, the device will go to sleep mode and the network status will be unregistered.

# 4. Operation Guide

# 4.1 NFC Configuration

EM400-UDL can be configured via NFC.

- 1. Download and install "Milesight ToolBox" App from Google Play or App Store.
- 2. Enable NFC on the smartphone and open "Milesight ToolBox" App.
- 3. Attach the smartphone with NFC area to the device to read the basic information.

4. Basic information and settings of devices will be shown on ToolBox if it's recognized successfully. You can switch on/off, read and write the device by tapping the button on the Apps. In order to protect the security of devices, password validation is required when configuring via unused phone. Default password is **123456**.

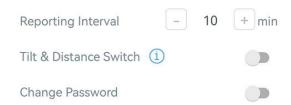

Status	Setting	Maintenance
SN	6329	C42903640033
Model	EM4	400-UDL-470M
PN		C050
Device EUI	24E1	24329C429036
Firmware Version		V1.1-a4
Hardware Version		V1.0
Device Status		ON

### Note:

- 1) Ensure the location of smartphone NFC area and it's recommended to take off phone case.
- 2) If the smartphone fails to read/write configurations via NFC, keep the phone away and back to try again.
- 3) EM400-UDL can also be configured by dedicated NFC reader provided by Milesight IoT.

# 4.2 Basic Settings

Go to **Device > Setting > General Settings** to change the reporting interval, etc.

Parameters	Description
	Reporting interval of transmitting data to server.
Reporting Interval	LoRaWAN® Version: 10 minutes as default, range: 1~1080 minutes;
	NB Version: 30 minutes as default, range: 1~1440 minutes.
Tilt & Distance	When detecting that the offset angle is greater than 20 degrees, turn off
Switch	the distance sensor.
Change Password	Change the password for ToolBox App or software to access this device.
NB Version Only	
Cumulative	
Numbers	Store this number of periodic packets to report together.

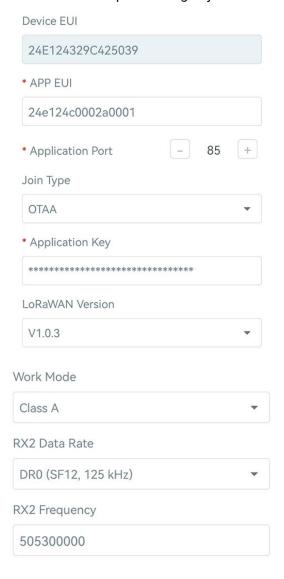

Positioning	Enable GNSS positioning. When the device is on motion status, it will only
Settings	upload positioning data instead of distance data.
The duration of	When device is detected to move beyond this duration, it will upload a
Motion	GNSS data packet.
The duration of	When device is detected to stop moving beyond this duration, it will upload
stationary	a GNSS data packet.
Motion Report	
Interval/Min	The interval to report GNSS data during the motion.

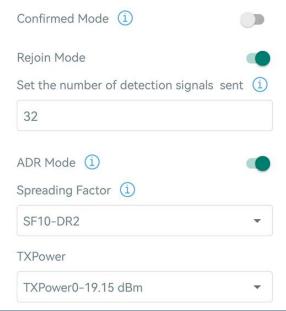

# 4.3 Communication Settings

# 4.3.1 LoRaWAN Settings (LoRaWAN® Version Only)

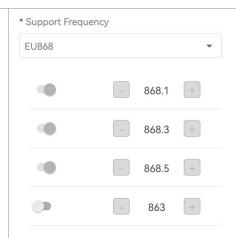

Go to **Device > Setting > LoRaWAN Settings** of ToolBox App to configure join type, App EUI, App Key and other information. You can also keep all settings by default.

Parameters	Description
Device EUI	Unique ID of the device which can also be found on the label.
App EUI	Default App EUI is 24E124C0002A0001.
Application Port	The port used for sending and receiving data, default port is 85.
Join Type	OTAA and ABP mode are available.
Application Key	Appkey for OTAA mode, default is 5572404C696E6B4C6F52613230313823.
Device Address	DevAddr for ABP mode, default is the 5 <sup>th</sup> to 12 <sup>th</sup> digits of SN.
Network Session Key	Nwkskey for ABP mode, default is 5572404C696E6B4C6F52613230313823.
Application Session Key	Appskey for ABP mode, default is 5572404C696E6B4C6F52613230313823.
LoRaWAN Version	V1.0.2, V1.0.3 are available.
Work Mode	It's fixed as Class A.
RX2 Data Rate	RX2 data rate to receive downlinks.
RX2 Frequency	RX2 frequency to receive downlinks. Unit: Hz
Channel	Enable or disable the frequency to send uplinks.

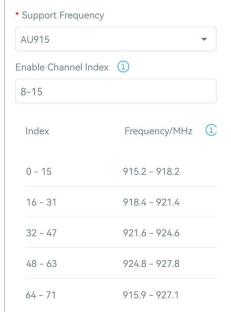

If frequency is one of CN470/AU915/US915, enter the index of the channel that you want to enable and make them separated by commas.

### **Examples:**

- 1, 40: Enabling Channel 1 and Channel 40
- 1-40: Enabling Channel 1 to Channel 40
- 1-40, 60: Enabling Channel 1 to Channel 40 and Channel 60

All: Enabling all channels

Null: Indicates that all channels are disabled

Spread Factor	If ADR is disabled, the device will send data via this spread factor.
Confirmed Mode	If the device does not receive ACK packet from network server, it will resend data once.
Rejoin Mode	Reporting interval ≤ 35 mins: the device will send a specific number of LinkCheckReq MAC packets to the network server every reporting interval or 2*reporting interval to validate connectivity; If there is no response, the device will re-join the network.  Reporting interval > 35 mins: the device will send a specific number of

	LinkCheckReq MAC packets to the network server every reporting interval to validate connectivity; If there is no response, the device will re-join the
	network.
Set the number of	When rejoin mode is enabled, set the number of LinkCheckReq packets sent.
packets sent	Note: the actual sending number is <b>Set the number of packets sent</b> + 1.
ADR Mode	Allow network server to adjust datarate of the device.
Tx Power	Transmit power of device.

### Note:

- 1) Please contact sales for device EUI list if there are many units.
- 2) Please contact sales if you need random App keys before purchase.
- 3) Select OTAA mode if you use Milesight IoT cloud to manage devices.
- 4) Only OTAA mode supports rejoin mode.

# 4.3.2 Application Mode Settings (NB Version Only)

Go to **Device > Setting > Application Mode Settings** of ToolBox App to configure the application mode and server information.

Parameters	Description
Application Mode	Select from Milesight IoT Cloud, AWS, TCP, UDP, and MQTT.
AWS	
Server Address	Fill in the AWS server domain name which the data sends to.
CA File	Import the CA.crt file.
Client Certificate	Import the client certificate.

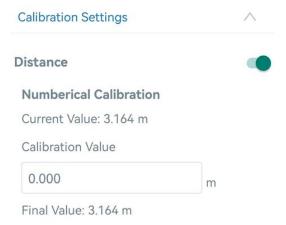

Client Key	Import the client key.
TCP/UDP	
Server Address	Fill in the TCP/UDP server address (IP/domain name).
Server Port	Fill in the TCP/UDP server port. Range: 1-65535.
MQTT	
Broker Address	Fill in MQTT broker address to receive data.
Port	Fill in MQTT broker port to receive data.
Client ID	Client ID is the unique identity of the client to the server, it must be unique
Client ID	when all clients are connected to the same server.
User Credentials	
Enable	Enable user credentials.
Username	The username used for connecting to MQTT broker.
Password	The password used for connecting to MQTT broker.
TLS	
Enable	Enable the TLS encryption in MQTT communication.
Protocol	It's fixed as TLS v1.2.
CA File	Import the CA.crt file.
Client Certificate	Import the client certificate.
Client Key	Import the client key.

# **4.4 Advanced Settings**

# 4.4.1 Calibration Settings

Go to **Device > Settings > Calibration Settings** to enable calibration. EM400-UDL supports two calibration types.

• Numerical Calibration: users can define calibration value to correct every distance.

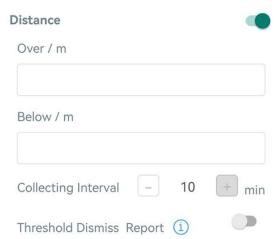

Measure Outlier Calibration: users can define either outlier range or value. When the device
distance value exceeds the outlier range (or range) comparing to last value, the device will
measure the distance again.

# 4.4.2 Threshold Settings

Go to **Device > Setting > Threshold Settings** to enable the threshold settings and input the distance threshold. EM400-UDL will detect whether the distance reaches the threshold according to collecting interval. If threshold is triggered, it uploads the current data once instantly.

Parameters	Description	
Collecting Interval	Collecting interval of ultrasonic sensor to detect distance. Range:	
	1~1080min	
Threshold Dismiss	When the collected value changes from outside the threshold to within the	
Report	threshold, a threshold release packet will be reported.	

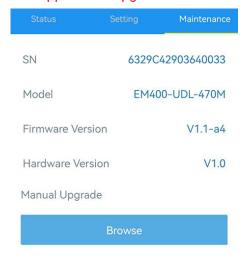

### 4.5 Maintenance

# 4.5.1 Upgrade

- 1. Download firmware from Milesight website to your smartphone.
- 2. Open Toolbox App, go to **Device > Maintenance** and click **Browse** to import firmware and upgrade the device.

### Note:

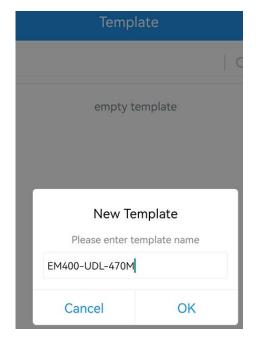

- 1) Operation on ToolBox is not supported during a firmware upgrade.
- 2) Only Android version ToolBox supports the upgrade feature.

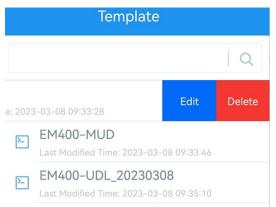

# **4.5.2 Backup**

EM400-UDL support configuration backup for easy and quick device configuration in bulk. Backup is allowed only for devices with the same model and frequency band.

- 1. Go to **Template** page on the App and save current settings as a template. You can also edit the template file.
- 2. Select one template file which saved in the smartphone and click **Write**, then attach to another device to write configuration.

**Note:** Slide the template item left to edit or delete the template. Click the template to edit the configurations.

# 4.5.3 Reset to Factory Default

Please select one of following methods to reset device:

Via Hardware: Hold on power button (internal) for more than 10s.

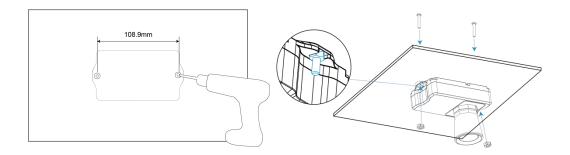

Via ToolBox App: Go to Device > Maintenance to click Reset, then attach smartphone with NFC area to device to complete reset.

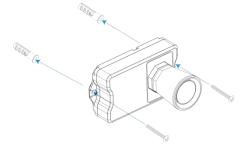

Status	Setting	Maintenance	
SN	63290	C42903640033	
Model	EM4	-00-UDL-470M	
Firmware Vers	ion	V1.1-a4	
Hardware Vers	sion	V1.0	
Manual Upgrade			
Browse			
Restore Factory Default			
Reset			

# 5. Installation

- 1. Drill two holes on the container cover according to the location of device mounting holes.
- 2. Put the device under container cover and align the holes in order to perfectly screw the bolts into the holes from the other side of the cover.

Besides, the device can also be fixed by two M4 mounting screws and wall plugs.

### **Installation Note:**

- In order to provide the best data transmission, please ensure the device is deployed within the signal range of the LoRaWAN® gateway or base station and keep it away from metal objects and obstacles.
- The device must be placed in a horizontal position above the detected object so that it has a clear path to the object.
- The device should be installed at least 30cm away from the side-wall without obstructions blocking the ultrasonic signal If the device needs to be installed on the side wall, please ensure the ultrasonic horn is away from the side wall.
- Do not install the ultrasonic sensor above the influent stream to ensure the measured surface rather than the incoming stream.

# 6. Communication Protocol

For decoder examples please find files on <a href="https://github.com/Milesight-IoT/SensorDecoders">https://github.com/Milesight-IoT/SensorDecoders</a>.

### 6.1 LoRaWAN® Version

All data are based on following format (HEX):

Channel1	Type1	Data1	Channel2	Type2	Data2	Channel 3	
1 Byte	1 Byte	N Bytes	1 Byte	1 Byte	M Bytes	1 Byte	

# 6.1.1 Uplink Data

Channel	Туре	Description
	01(Protocol Version)	01=>V1
	09 (Hardware Version)	01 40 => V1.4
ff	0a (Software Version)	01 14 => V1.14
"	0b (Power On)	Device is on
	Of (Device Type)	00: Class A, 01: Class B, 02: Class C
	16 (Device SN)	16 digits

Channel	Туре	Value	Channel	Туре	Value
ff	0a (Software version)	0101 (V1.1)	ff	Of (Device Type)	00 (Class A)

2. Periodic uplink: report according to reporting interval (10 mins by default).

	017564 0367f800 04820101 050001				
Channel	Туре	Value	Channel	Туре	Value
01	75 (Battery)	64 => 100%	03	67 (Temperature)	f8 00 => 00 f8 = 248 * 0.1 =24.8 °C
Channel	Туре	Value	Channel	Туре	Value
04	82 (Distance)	01 01 => 01 01 =257mm =0.257m	05	00 (Device Position)	01=Tilt

3. Distance Threshold: report when distance reaches the threshold or returns back to normal value.

8482330701		
Channel	Туре	Value
84	82	Distance: 33 07 =>07 33 = 1843mm = 1.843m
04	(Distance)	Alarm Status: 01= Alarm

4. Temperature Threshold: report when the abrupt change of temperature is greater than 5  $^{\circ}$ C.

8367220101		
Channel	Туре	Value
02	67	Temperature: 22 01 =>01 22 = 290 * 0.1 = 29°C
83	(Temperature)	Alarm Status: 01= Alarm

### **6.1.2 Downlink Commands**

EM400-UDL supports downlink commands to configure the device. Application port is 85 by default.

Channel	Туре	Description
	10 (Reboot)	ff (Reserved)
	03 (Set Reporting Interval)	2 Bytes, unit: s
	3e (Set Tilt & Distance Switch)	00 = Disable; 01 = Enable
		9 Bytes,
		CTRL(1B)+Min(2B)+Max(2B)+00000000(4B)
		CTRL:
		Bit2~Bit0:
ff		000-disable
"		001-below
	06 (Set Threshold Alarm)	010-above
		011-within
		100-below or above
		Bit5~Bit3=001
		Bit6=0
		Bit7:
		0 - disable threshold dismiss report
		1 - enable threshold dismiss report

# Example:

1. Set reporting interval as 20 minutes.

ff03b004		
Channel	Туре	Value
ff	03 (Set Reporting Interval)	b0 04 => 04 b0 = 1200s = 20 minutes

2. Reboot the device.

ff10ff
--------

Channel	Туре	Value
ff	10 (Reboot)	ff (Reserved)

3. Enable "Tilt & Distance Switch" feature.

ff3e01				
Channel	Туре	Value		
ff	3e (Set Tilt & Distance Switch)	01 = Enable		

4. When the distance is below 1 m or above 3 m, the sensor will trigger threshold alarm.

ff06 8c e803 b80b 0000 0000					
Channel	Туре	Value			
	06 (Set Threshold Alarm)	CTRL: 8c=10 001 100			
		100=below or above			
ff		10=enable threshold dismiss report			
		Min: e8 03=> 03 e8 =1000mm =1m			
		Max: b80b => 0b b8 =3000mm =3m			

# 6.2 NB Version

# 6.2.1 AWS/MQTT Topics

When the device is connected to AWS/MQTT server, the bi-directional communication uses different topics.

Торіс	Content
em/[SN]/status	Receive periodic reports, threshold alarms, etc.
em/[SN]/cmd/update	Send downlink commands
	Receive success ACK of downlink commands
em/[SN]/cmd/update/accepted	Note: users need to send downlink command to
	enable ACK feature first.

# 6.2.2 Uplink Data

All data are based on following format (HEX):

Start	ID	Packet Length	FLAG	Frame Counter	Protocol Version	Software Version	Hardware Version
02	0001	2 Bytes	00	0000	01	4 Bytes	4 Bytes
SN	IMEI	IMSI	ICCID	Signal	Data Length	Data1	
16	15	15	20	4.5.	0.5.	N.B.	
Bytes	Bytes	Bytes	Bytes	1 Byte	2 Bytes	N Bytes	•••

# Example:

# **Examples:**

1. Periodic uplink: report according to reporting interval\*cumulative numbers (30 mins\*12 by default) when the device is stationary.

	017564 0367f800 04820101 050000						
Channel	Туре	Value	Channel	Туре	Value		
01	75 (Battery)	64 => 100%	03	67 (Temperature)	f8 00 => 00 f8 = 248 * 0.1 =24.8 °C		
Channel	Туре	Value	Channel	Туре	Value		
04	82 (Distance)	01 01 => 01 01 =257mm =0.257m	05	00 (Device Position)	00=Normal		

2. GNSS uplink: report when positioning setting is enabled and the device is in motion.

	050001 068873c177019cff080722						
Channel	Туре	Value	Channel	Туре	Value		
05	00 (Device Position)	01=Tilt	06	88(Locati on)	Latitude: 73c17701=>01 77 c1 73=24625523/1000000=24.62 5523 Longitude: 9cff0807=>07 08 ff 9c=118030236/1000000=118. 030236 22=in motion		

3. Distance Threshold: report when distance reaches the threshold or returns back to normal value. If the threshold triggering time is close to periodic report time, it will send with periodic uplink.

	8482330701			
Channel	Туре	Value		
0.4	82	Distance: 33 07 =>07 33 = 1843mm = 1.843m		
84	(Distance)	01= Alarm		

4. Temperature Threshold: report once when the abrupt change of temperature is greater than  $5\,^{\circ}\text{C}$ .

	8367220101 0688FFFFFFFFFFFF20							
Channel	Туре	Value	Channel	Туре	Value			
83	67 (Temperatu re)	Temperature: 22 01 =>01 22 = 290 * 0.1 = 29 °C 01= Alarm	06	88(Locati on)	Latitude/longitude : FFFFFFF 20=unknown			

# **6.2.3 Downlink Commands**

EM400-UDL supports downlink commands to configure the device. Note that it can only receive downlink commands within the 10s after sending uplink packets.

Channel	Туре	Description
	10 (Reboot)	ff (Reserved)
	03 (Reporting Interval)	4 Bytes, unit: s
	3e (Tilt & Distance Switch)	00 = Disable; 01 = Enable
	a0 (Position Setting)	00 = Disable; 01 = Enable
	50 /D 11 (A4 11 )	5 Bytes,
	58 (Duration of Motion and	Byte 1: duration of motion, unit: s

Bit7:
0 - disable threshold dismiss report
1 - enable threshold dismiss report

# Example:

1. Set reporting interval as 20 minutes.

ff03b0040000		
Channel	Туре	Value
ff 03 (Set Reporting Interval)	b0 04 00 00 => 00 00 04 b0 = 1200s = 20	
	minutes	

2. Reboot the device.

ff10ff		
Channel	Туре	Value
ff	10 (Reboot)	ff (Reserved)

3. When the distance is below 1 m or above 3 m, the sensor will trigger threshold alarm.

ff06 8c e803 b80b 0000 0000		
Channel	Туре	Value
		CTRL: 8c=10 001 100
		100=below or above
ff	06 (Set Threshold Alarm)	10=enable threshold dismiss report
	Min: e8 03=> 03 e8 =1000mm =1m	
		Max: b80b => 0b b8 =3000mm =3m

4. Set duration of motion to 50s and duration of stationary to 180s.

ff5832b4000000		
Channel	Туре	Value
ff	58(Duration of Motion and	Duration of motion: 32=50s

Stationary)	Duration of stationary: b4 00 00 00=00
	00 00 b4=180s

-END-
