Overview

A total of 500+ Milesight cameras were installed throughout the Adailiya Cooperative Society, with a rich variety of models strategically deployed to match the needs of different environments—including panoramic dome cameras, LPR cameras, speed dome cameras, and so on.

This comprehensive system now forms a solid defense line that enhances day-to-day safety, operational visibility, vehicle access control, and evidence tracking.

Challenges

The Adailiya Cooperative Society required a powerful and flexible surveillance solution to address the complexity of a busy commercial environment. The system needed to:

Deliver full-coverage security monitoring across a wide range of scenarios—including entrances and exits, parking areas, indoor retail spaces, cash counters, and office zones.

License plate recognition algorithms to capture and analyze vehicle activity at entrance and exit, supporting both access safety and post-event investigations.

Centralized monitoring compatibility, including seamless integration with third-party platforms, ensuring unified surveillance management across the entire facility.

Solution

A total of 500+ Milesight cameras—spanning a wide variety of models—were deployed to achieve optimal coverage and functionality.

A Rich Mix of 500+ Cameras for Targeted Protection

To meet varied surveillance needs across the mall, a wide selection of Milesight cameras were deployed:

- Milesight 180° Panoramic Dome Cameras delivered wide-angle views in large open areas such as shopping zones, minimizing blind spots and reducing the number of cameras needed for full visibility.
- Milesight Motorized Pro Dome Cameras were strategically installed near shelves and merchandise areas. Equipped with a motorized lens and industry-leading image technologies, they enabled staff to zoom in for close-up views with precision. Even under low-light conditions in shelf aisles, these cameras consistently delivered clear, sharp, and vivid images, ensuring reliable monitoring in critical retail zones.
- Milesight 30X Speed Dome Cameras were placed at key entrance points. Operators could easily pan, tilt, and zoom to observe surrounding or focus on high-traffic areas such as cashier counters, all based on real-time needs.

LPR Cameras with PlateXpert Technology

At entry and exit of the outdoor parking lots, Milesight Intelligent Traffic Cameras were installed to capture and record traffic details.

Equipped with built-in PlateXpert technology - Milesight license plate recognition algorithms, these cameras not only capture clear, high-resolution images of license plates but also identified plate & vehicle related data in real time—providing essential support for access control, safety verification, and evidence retention.

Clean Integration with Central Monitoring

Captured license plate data was centrally managed through seamless integration with a third-party backend system. With black and white list detection, the system streamlined vehicle access control and enabled efficient post-incident investigations.

Meanwhile, surveillance across the mall was centralized via Milesight CMS, ensuring unified access to both real-time video and playback for daily operations.

Results

Leveraging a rich variety of camera models and built-in AI and LPR algorithms, Milesight successfully addressed the diverse and complex security needs of the Adailiya Cooperative Society. From clear, continuous monitoring in retail and office areas to accurate license plate recognition for vehicle access control, the solution delivers reliable, intelligent protection across all key zones.
